

LiMMat: The Living Matter Seminar Series

hosts

Professor Martin Polz

University of Vienna
Department for Microbiology
and Ecosystem Science

Wed February 26th @ 11am
ETH Hönggerberg, HIT E51
Lunchtime apero to follow

How interactions structure microbial diversity from genomes to communities

Martin Polz is a Professor of Microbial Ecology at the University of Vienna. Professor Polz's broad approach — combining field work, quantitative molecular approaches, genomics, physiology and modeling — has made key contributions to our understanding of the relationships between microbial community structure and function. His recent work includes novel observations of social behavior in natural microbial communities and new tools by which to define microbial populations by gene flow.

For meetings with Martin Polz, please contact: Jen Nguyen (nguyen@ifu.baug.ethz.ch)

The Living Matter Seminar Series, or LiMMat, is named for the river that runs through Zürich. This new interdisciplinary series is devoted to a broad range of topics related to the complexity of living systems, and is open to a wide audience of interested researchers from the Zürich area with background in the fields of physics and biology. If you are interested in seeing upcoming talks in the LiMMat series, visit our website: <https://stockerlab.ethz.ch/limmat/>
